**THE ONE TOOL
RHINOPLASTY SURGEONS
HAVE BEEN WAITING FOR!**

CartilagePlaner™

Single-use CartilagePlaner™ from Black & Black Surgical is a can't-miss tool for rhinoplasty procedures.

Surgeons can use CartilagePlaner™ as a nasal cartilage rasp to reduce or shape cartilage during surgery, and to shave down rib cartilage into fine particles for re-insertion to the dorsal hump.

With this unique design, razor-sharp rasp edges allow the surgeon to file down cartilage and achieve optimal particle size, thus eliminating the extra step of dicing the graft with a knife.
